

ARKIEVA

SUPPLY PLANNER

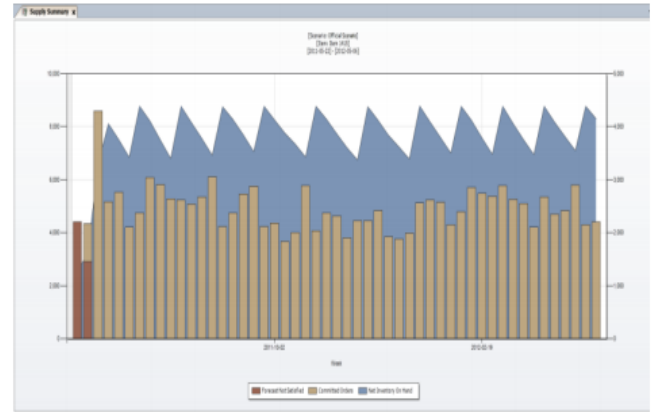

Arkieva Supply Planner

The Arkieva Supply Planner links production to current customer demand by supporting the analysis, reporting and collaborative efforts of Sales and Operations.

Arkieva Supply Planner also provides desktop capabilities for operations managers to promptly handle constantly evolving situation and still preserve both margins and customer service.

Supply Planner User Benefits:

- // Overall reduction in operating costs of up to 4%
- // Fewer setups and increased throughput
- // Increased flexibility due to ability to quickly replan
- // Decision making align with the goals of S&OP targets
- // Sustainable reduction in inventories up to 20%

Supply Planner Key Capabilities:

- // Performs MRP, DRP and CRP calculations
- // Enables advanced supply chain network optimization (SNO)
- // Models the constraints process, and cost characteristics of your supply chain
- // Links supply with current customer demand maximizing ability to capture additional revenue
- // Includes, multi-level, multi-site planning, manages inventories, resources and distribution assets across the supply chain
- // Provides what-if scenario management to evaluate alternative responses to changes in demand or supply (considers both customer service and margins)

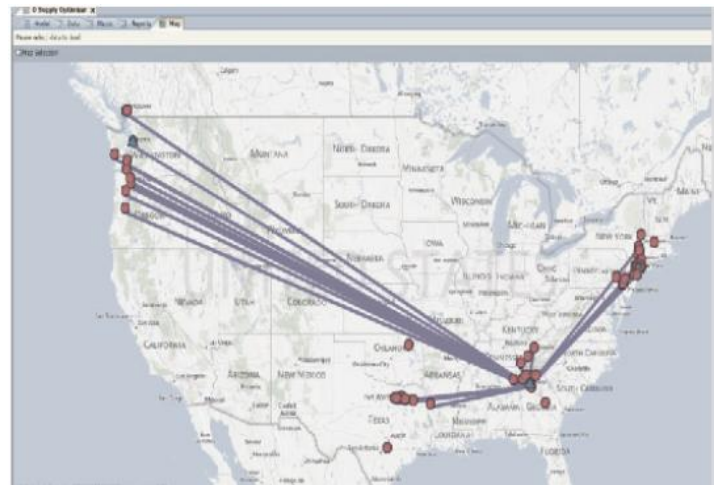

Manage Change Profitably

The Arkieva Supply Planner is a comprehensive optimization tool for keeping supply aligned with corporate objectives in the face of change. Creating an optimal plan to meet demand is a significant step in more effectively managing your supply chain.

The ability to profitably manage business disruptions separates companies who use their supply chains to their competitive advantage as opposed to those who can only explain “what happened” after it’s too late to respond.

The Arkieva Supply Planner helps to answer:

- // Will we be able to cover demand if a shutdown continues?
- // How soon should we begin building inventory to support an upcoming promotion?
- // What is the most cost-effective way to distribute our product?
- // Can we accept a significant additional order without disrupting customer service?
- // How should we respond to a spike in raw material costs?

Flexibility and rapid turnaround are essential in a changing marketplace, whether evaluating new growth opportunities or managing costs. Arkieva Supply Planner offers the ability to quickly create profit-driven supply scenarios for contingency planning, in a sandbox environment, before committing resources. Companies that invest time and effort to create agile, lean manufacturing environments reap benefits only if their planning is equally agile. Arkieva models the internal and external supply chain across the global enterprise; multi-site, multi-user, and enterprise wide.

Arkieva synchronizes material and capacity allocation with production and planned purchases, optimizing operations with true customer demand. Arkieva provides flexible ad-hoc reporting at any level (that can also be sent to Microsoft Excel with a single click), storing past operations plans for later comparison. Arkieva integrates easily with most ERP and other transaction and execution systems, enabling global visibility of operations and supporting collaborative supply chain planning.
